

MATH 1342 – Elementary Statistics – Week 16: Final Exam

Dec 7 – 9 | Review & Catch-Up for the Final Exam (Mon Dec 7) • Final Exam – Wed Dec 9, online (Blackboard, proctored) | Fall 2026 · Section 019 · MW 7:30–8:50 PM · RRC Room 8210

Course-level Objectives	Module-level Objectives	Learning Materials	#	Activities	#	Assessments	#
3. Find and use empirical probabilities in bootstrap distributions to find confidence intervals and in randomization distributions to test hypotheses. 4. Find and use theoretical probabilities from normal, t, chi-squared and F distributions to form confidence intervals and test hypotheses. Apply the 95% rule to normal and to approximately normal distributions. 7. Apply ideas of appropriate sampling techniques and experimental design to data production. 9. Estimate single means, difference of two means, single proportions and difference of two proportions using confidence intervals. Interpret the results. 10. Demonstrate skills in hypothesis testing for means and proportions, for single populations and comparison of two populations. 11. Demonstrate skills in hypothesis testing using chi-squared tests. 12. Demonstrate skills in inference for regression and ANOVA techniques.	1. Select and justify an appropriate inference procedure (CI or test; proportion, mean, two groups, paired, chi-square, ANOVA) for a new scenario. (CO9, CO10, CO11, CO12) 2. Carry out and interpret a complete confidence interval or hypothesis test, using simulation or theoretical distributions as appropriate. (CO3, CO4, CO9, CO10) 3. Interpret results in context, including what the study design allows the conclusion to claim about generalization and causation. (CO7)	Review Slides: Putting It All Together (answer key)	MO1, MO2, MO3	Review & catch-up session (Mon Dec 7): student-selected problems; choosing-the-right-test table	MO1, MO2, MO3	Final Exam – Wed Dec 9 (Blackboard, proctored, 2 hours, cumulative; no retake)	MO1, MO2, MO3
